

## Top 3 Reasons to Get a Skid Steer Chipper

Do you already have a skid steer? They're great machines. These compact machines are easy to maneuver, move quickly, and make large tasks easy. On your landscaping projects, you're also running into downed branches, limbs, twigs and other debris that you want to get rid of quickly and keep moving forward on your to-do list. A 5" Skid Steer Chipper is a great addition to your lineup. Operating off your existing skid steer's hydraulics, the [Crary® Bear Cat® CH500H skid steer chipper](#) is a perfect match.

### Reason 1: Flexibility

The [Crary Bear Cat CH500H 5-inch chipping capacity skid steer chipper](#) comes equipped with a universal attachment plate that offers not one, but two different attachment positions. Set up your skid steer chipper to face either the side of the machine or the front of the machine. This helps ergonomics and maneuverability wherever you're working. No two projects are ever the same, so when you can get your machine in position, have peace of mind that your skid steer chipper is easily set up in whatever position you need.

Plus, this particular model of skid steer comes with a 360-degree rotating discharge chute. Direct your woodchip pile wherever is most convenient. The deflector cap allows placement of chips wherever they need to go – a great solution for smaller spaces too.

## Reason 2: Efficiency

When out on the job, don't get held up by extra limbs and branches. Make them disappear quickly with the CH500H's four reversible heat-treated chipping blades, mounted on 140 pound dynamically balanced rotor. The [CH500H](#) includes flat faced quick couplers making it easy to plug into your machine. The hydraulic, direct drive motor provides optimal transfer of power.

Don't burn extra time and fuel to haul old branches away. Take care of them right then and there. No need for harsh chemicals or burning to quickly clean up.

Use the pile of chips you create to decorate landscaping, create flower beds, or even act as an erosion control mulch for sloped areas.

## Reason 3: Reduce Maintenance

The [CH500H skid steer chipper runs off your skid steer's existing hydraulic system](#). No need to maintain yet another small engine in your fleet. The Crary Bear Cat CH500H needs 15-22 gpm flow to drive the hydraulic feed roller and chipping rotor. At 22 gpm flow, the 140 lb. rotor turns at 4,000 rpm, making short work of debris.

The [CH500H](#) also has easy access to the rotor, meaning you can quickly adjust, sharpen, or replace chipping blades when needed without worrying about needing to make a service call to your dealer. We've said it before, but time is money. Save time and money by reducing maintenance costs with a skid steer chipper.

All of [Crary Bear Cat's skid steer Chippers](#) have extra [options and accessories](#) to help customize your machine to fit your needs. We know how great your skid steer is to your operation and how it helps make those tough tasks disappear. By adding a Crary Bear Cat skid steer Chipper as an attachment, you've created the perfect match of power and function.
